Summary

Frontend-focused Software Engineer with 6 years of experience building fintech products, including BNPL and SME lending platforms, in React and TypeScript. Own frontend architecture, standards and delivery end to end, lead vendor engineers, and partner with design, product, QA, backend and DevOps to ship reliable payment experiences.

Skills

Frontend
React.js, React Native, Next.js, Vite, Redux, Jotai, Zustand, TanStack Query, React Hook Form, Tailwind CSS, SCSS, MUI, Shadcn UI, Motion

Programming Languages
JavaScript, TypeScript, PHP

Backend & APIs
Express.js, Laravel, REST APIs

Databases
MySQL

Developer Tools
VS Code, Git, GitHub, GitLab, Bitbucket, Jira, Postman

AI-Assisted Development
Cursor, Antigravity

Languages
English, Chinese, Malay, Cantonese

Work Experience

Boost Credit.
Kuala Lumpur

Software Engineer
Feb. 2023 - Present

- Leading the ongoing revamp of Boost PayFlex, a BNPL product integrated with DuitNow QR (1.8M+ merchants), replacing a legacy JavaScript codebase with a feature-based architecture and TypeScript to make it easier to maintain and extend.
- Stay hands-on in development, building and maintaining PayFlex features and payment flows, refactoring legacy components, and debugging production issues across the frontend projects I own.
- Defined the frontend roadmap and engineering standards, and built a reusable template for admin panels and user journeys that accelerates feature development across teams.
- Lead vendor engineers on feature delivery and enforce code quality through pull request reviews, with frontend documentation maintained in Confluence.
- Built production observability with SigNoz and marketing event tracking, enabling faster issue diagnosis and reliable campaign analytics.
- Standardised AI context files across all frontend projects I own and adopted MCP workflows (e.g. Figma) to speed up design-to-code delivery.
- Manage releases to all environments and partner with cloud and DevOps engineers on deployment pipelines and post-release support.

KOMACI NETWORK. *Kuala Lumpur*

Software Engineer *Sep. 2020 - Feb. 2023*

- Developed and enhanced Komaci, a data-driven micro-influencer platform delivering targeted marketing solutions for brands through audience-focused campaign execution.
- Developed and scaled EZlive, a social commerce management platform supporting 250+ sellers and processing over 210,000 transactions.
- Collaborated closely with UI/UX designers to translate business requirements and design concepts into responsive, user-centric web applications.
- Designed and built reusable React component libraries, improving development efficiency and ensuring consistent user experiences across multiple products.
- Designed REST API specifications, database schemas, and end-to-end feature workflows in collaboration with backend engineers and product stakeholders.
- Integrated REST APIs and implemented scalable state management solutions using Axios, Redux, and Redux Thunk to support complex application requirements.
- Contributed to backend feature enhancements and bug fixes using Laravel and PHP, enabling smoother frontend-backend integration and delivery.

Eboss Group Holdings. *Kuala Lumpur*

Intern, Software Developer *Jun. 2019 - Aug. 2019*

- Contributed to backend bug fixes and minor enhancements, gaining hands-on exposure to production codebases.

Education

SEGi University *Selangor, Malaysia*

Bachelor of Information Technology *2017 - 2019*

- Major in Information Technology.
- CGPA: 3.19

SEGi University *Selangor, Malaysia*

Diploma of Information Technology *2015 - 2017*

- Major in Information Technology.
- CGPA: 3.07
