

Bryan Sim Yew Fung

SOFTWARE ENGINEER

Petaling Jaya, Selangor

☎ (+60) 16-5026872 | ✉ bryanyf@hotmail.com | 📱 bryansimyf | 🌐 bryansimyf

Summary

Software Engineer specialising in fintech products, including BNPL and SME lending solutions, using React and TypeScript. Experienced in delivering scalable UI systems, integrating payment flows, and leading component library development in agile teams.

Skills

Frontend

React.js, React Native, Next.js, Vite, Redux, Jotai, Zustand, TanStack Query, React Hook Form, Tailwind CSS, SCSS, MUI, Shadcn UI, Motion

Programming Languages

JavaScript, TypeScript, PHP

Backend & APIs

Express.js, Laravel, REST APIs

Databases

MySQL

Developer Tools

VS Code, Git, GitHub, GitLab, Bitbucket, Jira, Postman

AI-Assisted Development

Cursor, Antigravity

Languages

English, Chinese, Malay, Cantonese

Work Experience

Boost Credit.

SOFTWARE ENGINEER

Kuala Lumpur

Feb. 2023 - Present

- Developed Boost PayFlex, a BNPL payment solution enabling users to split payments over multiple months, integrated with DuitNow QR for seamless transactions across 1.8M+ merchants.
- Led a frontend architecture overhaul introducing a feature-based structure, TypeScript migration, and standardised coding practices to improve maintainability and developer consistency across the team.
- Proposed a shared UI package library to centralise reusable components across multiple products, aiming to standardise UI and reduce duplicated development effort.
- Defined and drove the frontend technical roadmap, establishing clear standards for architecture, development practices, and tooling adoption across the team.
- Architected a foundational template project for admin panels and user journeys, delivering a scalable and reusable codebase that accelerated feature development across teams.
- Integrated authenticated REST APIs and managed complex application state using Axios, Redux, Redux Thunk, Context API, Jotai, and TanStack Query across multiple products.
- Conducted code reviews for pull requests, enforcing code quality, consistency, and best practices across the frontend team.
- Managed deployments across all environments including production, and collaborated with cloud engineers and DevOps to set up domain configuration and CI/CD pipelines.

KOMACI NETWORK.

SOFTWARE ENGINEER

Kuala Lumpur

Sep. 2020 - Feb, 2023

- Developed and enhanced Komaci, a data-driven micro-influencer platform delivering targeted marketing solutions for brands through audience-focused campaign execution.
- Developed and scaled EZlive, a social commerce management platform supporting 250+ sellers and processing over 210,000 transactions.
- Collaborated closely with UI/UX designers to translate business requirements and design concepts into responsive, user-centric web applications.
- Designed and built reusable React component libraries, improving development efficiency and ensuring consistent user experiences across multiple products.
- Designed REST API specifications, database schemas, and end-to-end feature workflows in collaboration with backend engineers and product stakeholders.
- Integrated REST APIs and implemented scalable state management solutions using Axios, Redux, and Redux Thunk to support complex application requirements.
- Contributed to backend feature enhancements and bug fixes using Laravel and PHP, enabling smoother frontend-backend integration and delivery.

Eboss Group Holdings.

INTERN, SOFTWARE DEVELOPER

Kuala Lumpur

Jun. 2019 - Aug. 2019

- Contributed to backend bug fixes and minor enhancements, gaining hands-on exposure to production codebases.

Education

SEGi University

BACHELOR OF INFORMATION TECHNOLOGY

Selangor, Malaysia

2017 - 2019

- Major in Information Technology.
- CGPA: 3.19

SEGi University

DIPLOMA OF INFORMATION TECHNOLOGY

Selangor, Malaysia

2015 - 2017

- Major in Information Technology.
- CGPA: 3.07
